Case Study –Landholder liaison, Revegetation and Fencing Queensland Water Infrastructure – Cedar Grove Weir

Project Objective

- Revegetation and stabilisation of the Logan River upstream from the Cedar Grove Weir

Project overview

- Liaison with 8 land holders across 33 separate sites
- Supply and installation of 17 km of cattle fencing
- Weed treatment and site preparation
- Supply and installation of native plants, mulch and tree guards
- Direct seeding
- Watering and Maintenance

Challenges

- Negotiation of suitable areas to be revegetated and their incorporation into day to day farm operations
- Isolated sites with extremely difficult access

Environmental benefits

- Reduction in erosion and sedimentation
- Establishment of native vegetation
